

PT APPLICATION INSPECTOR

COMPREHENSIVE SAST/SCA
SCANNER

Product overview

Is a comprehensive static application security testing (SAST) and software composition analysis (SCA) solution that provides high-quality analysis and convenient tools to automatically confirm vulnerabilities, significantly speeding up work with reports and simplifying cooperation between security specialists and developers.

Why PT AI

Early detection

PT AI integrates into your CI/CD pipelines, allowing security scans to run at the earliest stages of the SSDLC.

Comprehensive security coverage

Supports Static Application Security Testing (SAST) and Software Composition Analysis (SCA) to secure both custom code and open-source dependencies.

Centralized quality gates

Built-in capabilities to enforce quality gates across CI/CD systems, ensuring consistent security policies.

Scalable and developer-friendly

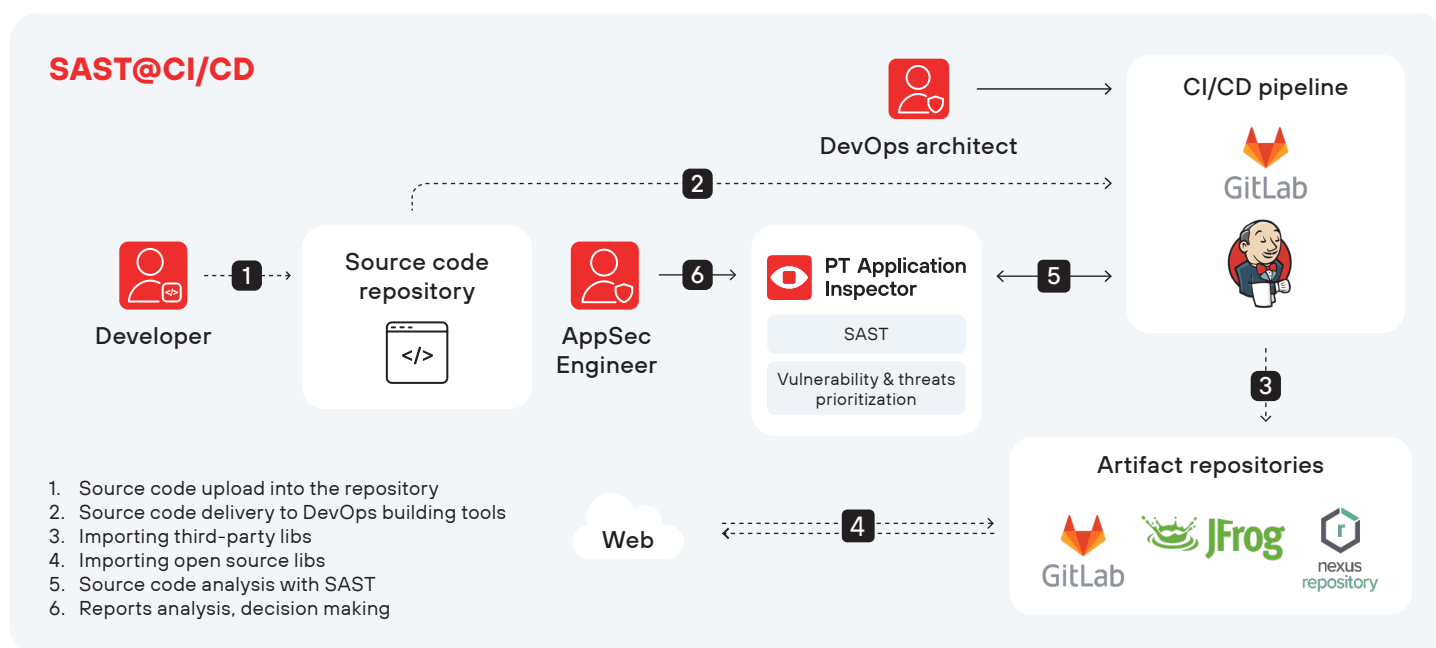

Automated processes and integration reduce manual work, making it easier for developers to adopt security practices.

Key benefits

99% of financial applications, may contain high-risk vulnerabilities

85% of applications contain vulnerabilities that enable attacks on users

72% of vulnerabilities are due to errors in code

What you get

Enterprise-Grade Automation

PT Application Inspector is a comprehensive AppSec platform built for enterprise environments, offering seamless integration into CI/CD pipelines to support scalable, automation-driven secure development.

Real Results, Not Noise

Designed to prioritize what matters, PT AI uses advanced code analysis to eliminate false positives and surface only high-confidence vulnerabilities, enabling teams to focus on fixing real issues faster.
